Md Saiful Islam - Saif

Senior Software Engineer

saifulislamsaaif@gmail.com | +46 769 702 327
linkedin.com/in/saifulislamsaaif

Summary:
Senior back-end engineer with 16+ years of experience in C#/.NET, Oracle PL/SQL and performance-driven design. Currently a consultant at Sigma Technology, developing IMI Supply Chain Solutions' warehouse management system: pick order release, simulation and testing, data-warehouse exports and robotics integrations. Previously built cloud-native APIs for the NIOX VERO medical device platform, contributed to a large-scale internal platform at Meta, and led a Hyperledger-based proxy voting platform for NuArca. I use AI-assisted development daily.

Key Competencies

- Full-Stack Engineering: C#, Java, Spring Boot, React Native, AngularJS
- System Architecture: Designed secure, scalable backend systems and distributed service-oriented platforms
- API & System Design: REST APIs, microservices, scalable architecture
- Database Engineering & Optimization: Expert in Oracle PL/SQL, SQL Server, PostgreSQL, ETL pipelines, data modeling, and large-scale query optimization across financial-grade platforms.
- Agile Leadership: Global team collaboration, mentoring, product ownership
- Cloud & DevOps Engineering: Experienced in Azure, AWS, Docker and Kubernetes, working in teams with CI/CD (Jenkins, Azure DevOps) within Agile delivery environments.
- AI & Product Innovation: Data Science background, analytics, and ML exposure
- AI-Assisted Software Development (Claude Code): problem analysis, solution design, implementation, code review, and unit testing
- Warehouse Management Systems (WMS): pick order release, warehouse-automation (robotics) integrations, and data-warehouse exports
- Continuous Learning: Exploring ML/AI platforms, edge compute, and sustainable digital systems

Technical Stack

- Languages: C#, Oracle PL/SQL, Java, Golang, Python, SQL, JavaScript
- Frameworks: Spring Boot, ASP.NET MVC, React Native, AngularJS
- Databases: Oracle (PL/SQL), SQL Server, PostgreSQL, MariaDB
- DevOps Tools: Jenkins, Azure DevOps, Docker, Kubernetes
- Testing: Unit Testing, xUnit, NUnit, NSubstitute, JUnit, Postman
- Blockchain: IBM Hyperledger Fabric, Golang smart contracts (chaincode), CouchDB, Kafka, distributed ledger integration

Career Highlights

- Supporting backend engineering for Meta's internal platforms (via Sigma), focused on performance and scalability
- Delivered a scalable blockchain-based proxy voting system used by millions (NuArca/AST), serving as Data Service Lead—owning database architecture, query optimization, and SQL-Blockchain data integration.
- Led cross-functional Agile teams and mentored engineers in enterprise and AI-adjacent solutions
- Strong track record in performance tuning, secure API development, and regulatory-grade reporting systems.

Professional Experience – Key Projects:

1. Software Engineer, PS team (September 2025 - Present) | **Sigma Technology Software Solutions**

On assignment at IMI (Industri-Matematik International AB)
Hässleholm, Sweden | September 2025 – Present

C#/.NET and Oracle PL/SQL development, with Python tooling, across IMI Supply Chain Solutions' warehouse management system (WMS): the pick order release engine, data-export integrations, warehouse-automation partner integrations, and internal tooling.

Key Responsibilities:

- Simulation & Testing Framework – Developed a simulation and unit-testing framework in Python and .NET for the pick order release engine. It includes a Python pipeline that transforms real customer data from Excel to JSON for realistic one-day simulation scenarios, and parallel data loading that updates both persistent storage and in-memory structures to mirror production behavior.
- Release Algorithm Optimization – Collaborated on optimizing the release algorithm's prioritization, thresholds, and consolidation rules based on simulation results.
- Refactoring & Testability – Refactored core release and consolidation logic, extracting auto-consolidation decisions into an independently testable component. The work was guided by static-analysis findings and covered by new unit tests.
- Warehouse-Automation Integrations – Extended integrations with third-party warehouse-automation (robotics) systems, including support for grouped pick orders.
- Data-Export Subsystem – Owned and extended the customer data-export subsystem: modernized secure file transfer, centralized authentication and configuration, closed a data-privacy gap, added streaming for large exports, and delivered new data-warehouse export feeds.
- Production Support – Diagnosed and resolved production defects in pick, replenishment, and consolidation logic through log and report analysis, root-cause investigation, and targeted fixes.
- Audit Logging – Built an end-to-end audit logging system for an internal authorization-management tool, with a persistent diff-based audit trail, automatic log rotation and backup, and real-time operational visibility in the UI.

Technologies & Tools:
C#, .NET, Oracle PL/SQL, Python, Excel/JSON pipelines, unit testing, parallel processing, simulation, Claude Code (AI-assisted development), WMS/supply chain domain

2. **System Consultant / Team Lead** (August 2023 – August 2025) | **Alten Sweden AB**

System Consultant – NIOX API Development (In-house project | May 2025 – August 2025)
📍 Gothenburg, Sweden | 🕓 May 2025 – August 2025 | 🔒 MedTech Backend – Confidential

Developed a cloud-based backend API for a mobile companion app connected to the NIOX VERO medical device, including operational support capabilities for cloud deployment.

Key Responsibilities:
🔧 Backend & API Development – Built REST endpoints using C#/.NET Minimal APIs, aligned with mobile workflows and validation.
🔐 Security & Access Control – Implemented JWT auth + refresh tokens and RBAC policies.
📄 Documentation & Onboarding – Maintained OpenAPI/Swagger and Postman collections for testing and onboarding.

Technologies & Tools:
C#, .NET (Minimal API), SQL Server, Dapper, JWT/RBAC, Azure Container Apps, Azure SQL, Blob Storage, Managed Identity, Key Vault, Hangfire, OpenTelemetry, Swagger/OpenAPI, Postman.

Team Lead – on assignment at Meta via Sigma Connectivity AB
📍 Lund, Sweden | 🕓 August 2023 – April 2025
🔒 Confidential Project – NDA Compliance

Supported the development of a large-scale internal platform at Meta as a contingent engineer via Sigma Connectivity AB. My role spanned backend and mobile feature development, on-call reliability engineering, and technical leadership within a globally distributed Agile team. The project emphasized performance, scalability, and adherence to strict security protocols under NDA.

Key Responsibilities:
🔧 Feature Development & Optimization – Built and enhanced scalable backend services and mobile features using Hack and React Native.
🛠️ Production Support & System Reliability – Handled on-call engineering, diagnosed issues, and delivered fixes across critical environments.
🧠 Technical Leadership & Mentorship – Guided sprint planning, mentored junior engineers, and upheld internal development standards.
🤝 Stakeholder Collaboration – Coordinated with Meta's product owners, engineers, and POCs across time zones and teams.
📐 Architecture & Code Quality – Contributed to internal frameworks, conducted code reviews, and enforced engineering best practices.

Technologies & Tools:
Languages: Hack, React Native
Dev Practices: Agile (Scrum/Kanban), CI/CD Principles
Collaboration: Meta-specific tools (Workplace Chat, Zoom)

3. **Senior Software Engineer / Team Lead** (September 2011 - May 2023)
Orion Informatics Ltd | Dhaka, Bangladesh
🕓 September 2011 – May 2023

Over a 12-year journey, progressed from Software Engineer to Team Lead, delivering enterprise-grade backend systems, regulatory platforms, and blockchain integrations for global clients in fintech, compliance, and security—such as Wolters Kluwer Financial Services (WKFS), NuArca, AST, and Sontiq (TransUnion).

🔹 **NuArca – Blockchain-Based Proxy Voting Solution**
Senior Software Engineer/Data Service Lead | 📍 USA | 🕓 Jan 2017 – May 2023 | 🌐 www.nuarca.com

Led the full-cycle development of a secure, scalable proxy voting platform for AST (American Stock Transfer)—a major US financial services provider. The system, built on IBM Hyperledger Fabric, enables transparent, auditable, and regulation-compliant voting for millions of shareholders across public companies.
This project represents a pioneering application of enterprise blockchain in financial governance and compliance—merging distributed ledger technology with traditional SQL data systems, real-time analytics, and cloud-native infrastructure.

Key Achievements & Responsibilities:
🧩 **Architected a hybrid backend** combining SQL Server and private blockchain IBM Hyperledger Fabric to manage vote records, stakeholder rights, and compliance workflows.
🔐 **Designed and implemented secure REST APIs** and microservices (Java/Spring Boot) for interfacing between the blockchain and external applications, and wrote Hyperledger Fabric smart contracts (chaincode) in Golang.
📊 **Engineered analytics pipelines** and dashboards to provide real-time voting summaries and post-event compliance reports.
🛠️ **Led system integration** with financial data providers, corporate registrars, and client-side interfaces using Kafka, Docker, and Kubernetes.
👨‍💼 **Acted as Scrum Master**, managing Agile delivery across multiple time zones, mentoring junior developers, and ensuring quality via code reviews and performance audits.

Technologies Used:
Backend & APIs: Java, Spring Boot, RESTful APIs
Blockchain & Messaging: IBM Hyperledger Fabric, Golang chaincode (smart contracts), CouchDB, Kafka
Infrastructure: Docker, Kubernetes, Gradle, Jenkins
Frontend: Angular 4, Bootstrap, Sass
Database: Microsoft SQL Server (2016–2019)
Project Management: Jira, Confluence, Agile/Scrum

🔹 **Wolters Kluwer Financial Services (WKFS) – WizNG (HMDA Compliance System)**
Senior Software Engineer/Team Lead | 📍 USA | 🕓 Dec 2014 – Dec 2016 | 🌐 www.wolterskluwer.com

Led the development of WizNG, a next-generation compliance management system for Home Mortgage Disclosure Act (HMDA) reporting—used by 8 of the top 10 US banks. This enterprise solution detects compliance violations, calculates rate spreads, geocodes records, and generates reports for federal submission.
Delivered across a complex multi-server infrastructure, WizNG significantly improved HMDA reporting efficiency and accuracy, replacing older FFIEC workflows with a modern, modular web-based solution.

Key Achievements & Responsibilities

👨‍✈️ **Led a team** to build core backend and frontend modules using C#, ASP.NET MVC, Web API, SQL Server and AngularJS.
🗂️ **Implemented a File Management System** using the elFinder third-party tool, enabling intuitive file handling within compliance workflows and simplifying LAR document operations.
🗄️ **Engineered database logic** including SPs, UDFs, triggers, and indexing to optimize large-scale LAR (Loan Application Register) processing.
🔗 **Built XML Web Services** and REST APIs for interoperability with external banking systems.
📈 **Enhanced reporting logic** for real-time error detection, automated geocoding, and compliance submission.
🛠️ Collaborated with US-based product teams, managed release planning, and maintained Agile documentation via Jira.

Technologies Used:
Backend: C#, ASP.NET MVC, Web API, XML Web Services
Frontend: AngularJS, JavaScript, jQuery, Telerik
Database: SQL Server 2012, T-SQL
Testing: NUnit, NSubstitute, FluentAPI
Others: elFinder, Hangfire, SignalR, Jira

🔹 **Wolters Kluwer Financial Services (WKFS) – AML (Anti-Money Laundering) monitoring system**
Role: Senior Software Engineer | 📍 USA | 🕓 Sep 2012 – May 2014 | 🌐 www.wolterskluwer.com

Developed and maintained a comprehensive Anti-Money Laundering (AML) solution for US-based financial institutions. The platform ensured compliance with the Bank Secrecy Act (BSA) and USA PATRIOT Act, supporting transactional monitoring, profiling, SAR (Suspicious Activity Report) automation, and case investigation tools. A regulatory-grade system for suspicious activity detection and financial compliance reporting, integrating data analysis with audit trails and rule-based risk assessment.

- Enhanced transaction monitoring, suspicious activity profiling, and compliance automation.
- Developed backend services in Java/Spring; configured Intellinx modules for financial audits.

Technologies Used: Java, Spring, Hibernate, SQL Server, Intellinx Platform, JSP

🔹 **Wolters Kluwer Financial Services (WKFS) – HMDA Wiz**
A web-based HMDA compliance and reporting solution offering data import, scrubbing, and submission for financial institutions.

Role: Software Engineer | 📍 USA | 🕓 Sep 2011 – Aug 2012 | 🌐 www.wolterskluwer.com

- Implemented edit and validation modules using Telerik RadGrid and MOSS 2007 platform.
- Developed backend and front-end features in ASP.NET 3.5 (C#), SQL Server, and JavaScript.
- Enhanced regulatory compliance workflows for financial institutions.

Technologies Used: ASP.NET 3.5 (C#), SQL Server, Telerik RadGrid, MOSS 2007, JavaScript, jQuery

---

4. 🔹 **GraphicPeople – Trustpilot Platform**
Role: System Developer | Client: Trustpilot | 📍 Dhaka, Bangladesh | 🕓 May 2014 – Aug 2014
🌐 www.graphicpeoplestudio.com | Trustpilot
Contributed to the core platform development of Trustpilot, focusing on performance, scalability, and code quality across a distributed cloud-based architecture. Worked closely with global teams in Agile sprints to deliver enhancements to Trustpilot's rating and review systems.
Key Responsibilities:
🔧 Developed features across the stack using ASP.NET MVC, C#, NHibernate, and FluentValidation.
🧩 Enhanced client-side functionality using AngularJS, JavaScript, and jQuery.
☁️ Supported deployment and infrastructure tasks in AWS, with SQL Server as the core data store.
🤝 Participated in Agile ceremonies and sprint planning with product owners and distributed teams.
Technologies Used: C#, ASP.NET MVC, NHibernate, FluentValidation, AngularJS, JavaScript, jQuery, SQL Server, AWS

---

5. 🔹 **ICT Alliance – Amar Hisab POS System**
Role: Software Engineer Intern / Software Engineer | 📍 Dhaka, Bangladesh | 🕓 Sept 2010 – Sept 2011 | 🌐 ICT Alliance
Designed and developed Amar Hisab, a localized POS and accounting system tailored for Bangla-speaking SMEs. The platform supported financial management, inventory tracking, and real-time reporting in a user-friendly interface.
Key Responsibilities:
💻 Developed backend logic and financial workflows using C#, ASP.NET, and SQL Server.
📊 Created custom financial reports using Crystal Reports, with localized UI and data export features.
🎯 Built the frontend interface and validation logic with JavaScript and jQuery.
🌐 Implemented Bangla language and localization support for accounting modules.
Technologies Used: C#, ASP.NET, SQL Server, JavaScript, jQuery, Crystal Reports

---

Academic Qualification:

- Master's degree Data Science, Högskolan i Skövde / University of Skövde, Sweden. 2022 – Ongoing
- Bachelor of Science (B.Sc.) Computer science and Engineering, Ahsanullah University of Science and Technology, Dhaka, Bangladesh, 2006-2010

Certifications:

- Claude Code 4: Agentic Coding for Professional Developers, LinkedIn Learning, October 2026
- Claude Code 101 by Anthropic, LinkedIn Learning, October 2026

Honors & Award:

Title	Issuer / Organizer	Date	Details / Highlights
Volvo Hackathon – The Assembly Line	Volvo Group Digital & IT, Skövde, Sweden	Nov 2022	Designed a future-proof assembly instruction concept for Industry 4.0.
Employee of the Year – 2018	NuArca	Mar 2019	Awarded for outstanding performance among 35+ engineers.
Employee of the Year – 2017	NuArca	Feb 2018	Recognized for significant team contributions and project impact.
Code Warriors' Challenge – Finalist	BASIS (Bangladesh Association of Software & Information Services)	Feb 2011	National-level .NET track finalist with team "Destro_".
National ICT Internship Program	Ministry of Science & ICT, Bangladesh	Jan 2010	Successfully completed internship via Bangladesh Computer Council (Batch 9).

Language Proficiency: Swedish(Elementary Proficiency), English (Professional Proficiency), Bangla (Native)

Soft Skills: Known for strong leadership, team collaboration, digital mindset, persuasive communication, and continuous self-learning.
